Dear Mr. Depeppe,

This is a letter from Mauricio Aquino and Ana Legg on the behalf of our technical writing team for INOV 2100 with Dr. Stiles and Mr. Lippert. To get you acquainted with our team, we will both tell you a little about ourselves.

My name is Mauricio Aquino, and I am a Computer Science major enrolled in the bachelors of innovation program. I chose this degree program because of the unique skills and opportunities I acquire from working with clients such as yourself. I have always had an interest in cyber security and have considered continuing my education in that field after I have completed my current degree. I was thrilled to find out that we would be given the chance to work with you this semester.

My name is Ana Legg, and I am a Museum Studies and Gallery Practice major. As a student, I have had experience with education, which has sharpened my skills in creative thinking, productivity and working in a team. I also have experience teaching children how to read and write. I hope to use my educational experience to help students and adults learn about sport cyber threats.

Our writing team has decided to pursue a proposal to the National Science Foundation (NSF). We believe the NSF will be the perfect fit for obtaining the funding you need for the Cyber Resilience Institute (CRI) since many of the CRI's goals and objectives are similar to that of the National Science Foundation's. Our team has chosen to focus on C-Watch and CrowdWatch as the funding focus for this proposal. This proposal has the ability to acquire substantial funding for the CRI and we hope you will consider submitting it to the NSF.

The proposal package contains everything you will need to submit for the NSF proposal. Inside the proposal package, you will find the original proposal request, the project summary, project narrative, supplementary documents that are required for submission, and some additional

materials we believe you may need. We have also created a Follow-Up Guide that contains additional tasks you will have to complete before submitting the proposal to the NSF. We have completed a majority of the writing for this proposal and filled out some information within the documents in this proposal package. Anything that is incomplete in the required documents, is either intended to be left blank, or is something we have provided documentation for in the follow up guide. This documentation will help you to take the steps to completing the proposal prior to submission and the steps you will need to take after submitting the proposal to the NSF.

The proposal package has a couple of attachments that are required for the NSF Grant. Please read the Follow-Up Guide instructions and make use of the additional resources we have provided you. In the Follow-Up Guide, you will see specific attachments with different field numbers. As previously mentioned, some fields in the documents have been left blank for you to fill out. There are also notes under each field number in our Follow-Up Guide documentation that explain the information that the NSF requires in these fields. Please follow their orders, as the NSF has strict guidelines and requirements. Whenever you are done with the required attachments, please click “Add Attachments” in the corresponding documents.

We would both like to thank you for the opportunity to work with you this semester and support your continued efforts in establishing cyber resiliency in the sports profession. We believe that our combined background in computer science and education will prove to be an advantage as a writing team since it has provided us with unique experiences and expertise. We value your pursuit in sport cyber security, and we are confident our team will be a valuable asset for finding the perfect partners who can supply the funding you need.

Sincerely,

Ana Legg and Mauricio Aquino
